

ÇELEBİ HAVA SERVİSİ A.Ş. – ENERGY POLICY

As Çelebi Hava Servisi A.Ş., the objective of our Energy Management System within the scope of our ground handling and cargo operations is to establish an effective, efficient, and sustainable ISO 50001 Energy Management System that consistently meets the requirements of applicable legislation and the expectations of interested parties, and to continuously improve this system in alignment with our company's strategic direction.

In this regard, our commitments concerning our energy policy, established based on stakeholder expectations and our corporate approach, are defined below:

- To ensure the continuous improvement of our energy performance and management system by establishing a structure in compliance with the ISO 50001 Energy Management System standard,
- To provide the necessary information and all required resources to achieve our energy objectives and targets,
- To comply with all applicable legal and other requirements regarding energy efficiency, energy use, and energy consumption,
- To support the procurement of energy-efficient products and services that impact energy performance, where they provide a significant contribution,
- To support design activities that take the improvement of energy performance into account,
- To determine, provide, and enhance the competencies of employees who have an impact on energy performance, and to engage in effective collaboration with all internal and external stakeholders to foster awareness for the efficient operation of the Energy Management System,
- To ensure the integration of our energy management system with our other existing management systems to the greatest extent possible,
- To plan and effectively implement energy efficiency activities aimed at reducing our environmental impact and greenhouse gas (GHG) emissions,
- To provide the necessary equipment for the monitoring and measurement of key characteristics within our energy data.
